Language Arts

The students continue to work on their argument papers and will also be finishing their middle school lists. They completed the ELA center assignments of affixes and roots, diagrammed sentences and two close reads about women in Ancient Rome and the city states.

Mathematics

In math, the students will be reviewing geometry with the area, perimeter, volume, and surface area formulas and the vocabulary associated with lines and angles.

Science

In science, we learned about the circulatory system. Mr. Jesse Hamman, cardiac sonographer, came and spoke to the students about the circulatory system. We would like to thank him for coming and sharing his knowledge with us. We would also like to thank Liam and George for being his patients. They both have working hearts! :) We will be learning about the respiratory and other body systems over the next two weeks. The students will also be talking about diseases and congenital defects. They will each be researching a topic in those areas.

Social Studies

We are learning about Ancient Rome.

Religion

In Theology of the Body, we will talk about vocations and living out God's will for us. We will also continue to learn about the Gospels.

Important Dates

8th Grade Class Trip: Thursday, May 30

Graduation with Reception and Awards following Mass: Friday, May 31

God's blessings,

Mrs. Hamman
